

Get control of your Documents with MAPSYS

The MAPSYS Document Imaging Foundations Solution is designed to be simple and flexible to use, yet powerful enough to meet your organization's Document Imaging and Management needs. It is designed in an open manner to allow easy integration with your existing copiers and software applications.

The Challenges:

- To manage documents in order to efficiently store and retrieve them in a secure manner.
- To support easy document retrieval locally or remotely through an easy to use search page.
- To provide Document retrieval using simple interfaces from existing applications.
- To provide workflow processes that allow approval of documents before they are published.
- To minimize the effort required to index documents.

Key Benefits:

- Reduced time to access documents.
- Efficient Document Indexing.
- Space savings through the elimination of physical document storage.
- Document access to multiple people at the same time.
- Lower risk of losing documents due to disaster or theft.
- Access documents locally or remotely.
- Secure documents or elements of a document based on roles.
- Interfaces available to view documents from Client applications.
- Support to import documents placed in shared folders with Copiers into a true Document Management system.

MAPSYS Document Imaging Foundations

Key Product Features:

- Leverages multiple data bases such as MSSQL, DB2, MySQL, and others.
- Scan images from any TWAIN compliant image source including most scanners (both feed and flatbed), copiers, preprocessing pass-through drivers, and many digital cameras.
- Automatic image import – Pull images from shared folders. (Allows you to pull images from copiers that send images to a shared folder).
- Ability to store and manage non-image files (e.g. Word documents, PDFs, plain text files, etc.).
- Manipulate scan jobs on the fly:
 - Add and remove images from a scan job.
 - Separate a single scan job into multiple jobs.
 - Combine multiple scan jobs into a single job.
 - Rotate scanned images.
- Automatic scan job separation through Barcoding.
- Automatic indexing via Barcode or Optical Character Recognition.
- Index importing via Data Source Integration Tool.
- Image redaction.
- Customizable workflow allows routing a Document through approval steps before publication.
- Convert documents to PDF.
- Email documents from within the application.
- Powerful document search.
- Web-based document search and delivery.
- Document viewing control based on roles.
- Integration API to display an image or set of images from your existing applications.

The MAPSYS Difference

All of the professionals on Team MAPSYS bring experience and commitment to Customer Success. MAPSYS Clients range from very small businesses to the Fortune 100 -- public and private -- in every industry. We have seen what works allowing MAPSYS to create a product that is powerful, secure and easy to implement and use. Technology that works with you and for you.

MAPSYS Implementation, Training and Support

MAPSYS understands that the key to our joint success is your satisfaction with our product. To that end, the MAPSYS Document Imaging Foundation solution includes Implementation and Training Services. In addition, MAPSYS will tailor a support option to meet the needs of your organization from migration from existing imaging solutions to on-going on-site support.
